PIC24F16KL402 Family
Silicon Errata and Data Sheet Clarification

The PIC24F16KL402 family devices that you have received conform functionally to the current Device Data Sheet (DS30001037**C**), except for the anomalies described in this document.

The silicon issues discussed in the following pages are for silicon revisions with the Device and Revision IDs listed in Table 1. The silicon issues are summarized in Table 2.

The errata described in this document will be addressed in future revisions of the PIC24F16KL402 family silicon.

Note: This document summarizes all silicon errata issues from all revisions of silicon, previous as well as current. Only the issues indicated in the last column of Table 2 apply to the current silicon revision (**A0**).

Data Sheet clarifications and corrections start on Page 4, following the discussion of silicon issues.

The silicon revision level can be identified using the current version of MPLAB® IDE and Microchip's programmers, debuggers, and emulation tools, which are available at the Microchip corporate web site (www.microchip.com).

For example, to identify the silicon revision level using MPLAB IDE in conjunction with MPLAB ICD 2 or PICkit™ 3:

1. Using the appropriate interface, connect the device to the MPLAB ICD 2 programmer/ debugger or PICkit™ 3.
2. From the main menu in MPLAB IDE, select *Configure>Select Device*, and then select the target part number in the dialog box.
3. Select the MPLAB hardware tool (*Debugger>Select Tool*).
4. Perform a "Connect" operation to the device (*Debugger>Connect*). Depending on the development tool used, the part number *and* Device Revision ID value appear in the **Output** window.

Note: If you are unable to extract the silicon revision level, please contact your local Microchip sales office for assistance.

The DEVREV values for the various PIC24F16KL402 family silicon revisions are shown in Table 1.

TABLE 1: SILICON DEVREV VALUES

Part Number	Device ID(1)	Revision ID for Silicon Revision(2)		Part Number	Device ID(1)	Revision ID for Silicon Revision(2)	
		A0	A1			A0	A1
PIC24F04KL100	4B01h	0000h	0001h	PIC24F08KL302	4B00h	0000h	0001h
PIC24F04KL101	4B02h			PIC24F08KL401	4B0Eh		
PIC24F08KL200	4B05h			PIC24F08KL402	4B04h		
PIC24F08KL201	4B06h			PIC24F16KL401	4B1Eh		
PIC24F08KL301	4B0Ah			PIC24F16KL402	4B14h		

Note 1: The Device IDs (DEVID and DEVREV) are located at the last two implemented addresses of configuration memory space. They are shown in hexadecimal in the format "DEVID DEVREV".

2: Refer to the *"PIC24FXXKL1XX/2XX/3XX/4XX Flash Programming Specifications"* (DS30625) for detailed information on Device and Revision IDs for your specific device.

TABLE 2: SILICON ISSUE SUMMARY

Module	Feature	Item Number	Issue Summary	Affected Revisions(1)	
				A0	A1
UART	Transmit	1.	UxTXBF flag may not indicate correctly.	X	
Oscillator	REFO	2.	REFO output unavailable at higher frequencies.	X	X
HLVD	Band Gap Reference	3.	BGVST and IRVST bits may not become set at extremely low temperatures	X	X

Note 1: Only those issues indicated in the last column apply to the current silicon revision.

Silicon Errata Issues

Note:	This document summarizes all silicon errata issues from all revisions of silicon, previous as well as current. Only the issues indicated by the shaded column in the following tables apply to the current silicon revision (**A1**).

1. Module: UART (Transmit)

The Transmit Buffer Full Flag, UTXBF (UxSTA<9>), may become cleared before data starts moving out of the full buffer. If the flag is used to determine when data can be written to the buffer, new data may not be accepted, and data may not be transmitted.

Work around

Poll the Transmit Buffer Empty Flag (TRMT, UxSTA<8>) to determine when the transmit buffer is empty and can be written to.

Alternatively, configure the UART to set the Transmit Interrupt Flag (UxTXIF) whenever a character is shifted into the Transmit Shift Register (UTXISEL<1:0> = 00). When a transmit interrupt occurs, this indicates that at least one buffer position is open and that the buffer can be written to.

Affected Silicon Revisions

A0	A1						
X							

2. Module: Oscillator (REFO)

When output frequencies above 16 MHz are selected for the Reference Clock Output (REFO), the peak output voltage on the REFO pin may be too low to be properly detected by external devices.

Work around

None.

Affected Silicon Revisions

A0	A1						
X	X						

3. Module: HLVD (Band Gap Reference)

At the extreme low end of the operating temperature range (near -40°C), the BGVST and IRVST flag bits (HLVDCON<6,5>) may not become set when the voltage references are stable and ready to use.

Work around

For applications that run at extremely cold temperatures, do not use the BGVST and IRVST bits as the sole indicator of band gap readiness. Include a time-out of 750 µs between enabling and using a reference.

Affected Silicon Revisions

A0	A1						
X	X						

Data Sheet Clarifications

The following typographic corrections and clarifications are to be noted for the latest version of the device data sheet (DS30001037**C**):

Note:	Corrections and additions are shown in **bold**. Where possible, the original bold text formatting has been removed for clarity.

1. Module: I/O Ports

The following is appended to the end of **Section 11.2.1 "Analog Selection Register"**:

"On devices which do not have an A/D Converter, it is still necessary to configure the ANSx registers in order to enable digital input buffers. Any I/O pins with an ANx function listed in red in the device pinout diagrams (Pages 3 through 5) will default to have the digital input buffer disabled."

2. Module: Special Features

In Register 23-6: FPOR: Reset Configuration register, the description for BORV<1:0> has been updated. The change is shown in **bold** below:

bit 6-5 BORV<1:0>: Brown-out Reset **Voltage Threshold** bits**(2)**

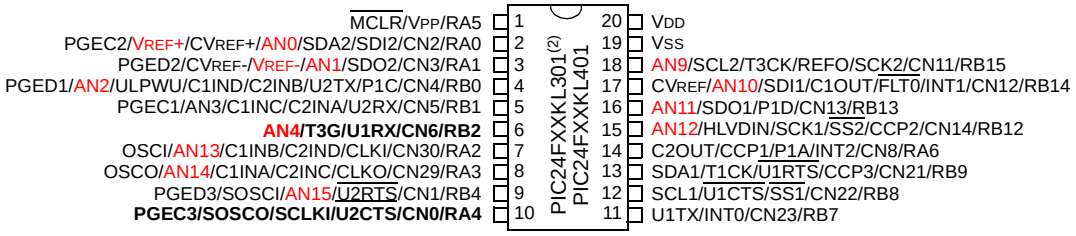
11 = Brown-out Reset is set to the low trip point
10 = Brown-out Reset is set to the middle trip point
01 = Brown-out Reset is set to the high trip point
00 = Downside protection on POR is enabled (Low-Power BOR is selected)

3. Module: Pin Diagrams

The Pin Diagram: PIC24FXXKL301/401 20-Pin PDIP/SSOP/SOIC has the functions reversed for Pin 6 and Pin 10. The corrected pin functions are shown in **bold** below.

Pin Diagrams: PIC24FXXKL301/401

20-Pin PDIP/SSOP/SOIC(1)



APPENDIX A: DOCUMENT REVISION HISTORY

Rev A Document (11/2011)

Initial release of this document; issued for revision A0. Includes silicon issues 1 (UART, Transmit) and 2 (Oscillator, REFO).

Rev B Document (4/2012)

Adds silicon issue 3 (HLVD, Band Gap Reference) to revision A0.

Adds data sheet clarifications 1 (Front Matter, Device Features), 2 (Pin Diagrams), 3 (Overview), 4 (I/O Ports), 5 (Master Synchronous Serial Port – MSSP) and 6 (Comparator).

Rev C Document (4/2013)

Adds silicon revision A1.

Rev D Document (3/2014)

Removes data sheet clarifications that were addressed in current Device Data Sheet (DS30001037**C**).

Adds data sheet clarifications 2 (Special Features) and 3 (Pin Diagrams).

NOTES:

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

QUALITY MANAGEMENT SYSTEM
CERTIFIED BY DNV
ISO/TS 16949

Microchip received ISO/TS-16949:2009 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona; Gresham, Oregon and design centers in California and India. The Company's quality system processes and procedures are for its PIC® MCUs and dsPIC® DSCs, KEELOQ® code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.
